

THE
FARMER'S, GRAZIER'S, AND BUTCHER'S
READY RECKONER;

A SHORT TABLE,
BY WHICH THE WEIGHT OF STOCK,

ACCORDING TO THE DIFFERENT USAGES IN ENGLAND,
CAN BE ASCERTAINED; AND THE

VALUE OF STOCK OF ANY SIZE,

WITH THE DIFFERENCE, AT ONCE DISCOVERED.

LONDON:

PRINTED FOR G. NICOL, BOOKSELLER, PALL-MALL.

1796.

THE many difficulties arising from the different modes of calculating the weight of stock, namely, by the Score of 20 *lb.*—the Stone of 14 *lb.*—the Stone of 8 *lb.*—and the Hundred, have induced the Publisher to put together a Table, by which these will at one view be equalized; and another Table also, by which the neat value of stock, from 3¼ *d.* to 7 *d.* a pound, may be instantly obtained.

It is well known, that in the London markets the mode of calculating the weight both of sheep and cattle is by the Stone of 8 *lb.*; in the north and east parts of England, by the Stone of 14 *lb.*; and in the south, west, and north-west parts of England, as well as Wales, by the Score of 20 *lb.*—The Score, therefore, as being the most usual, is adopted, and placed at the head of the second Table, which gives the neat value at so much a pound, and the others are made in the first Table to equal this, as before observed:—For instance—

A value is to be set on a fat ox—his weight is first laid at 45 Score a quarter, *i. e.* to sink the offal; he is supposed to be worth, according to the price of meat, we will say 6½ *d.* a pound—45 Score, that is 64 St. 4 *lb.* at 14 *lb.* to the Stone; that is 112 St. 4 *lb.* at 8 *lb.* to the Stone, at 6½ *d.* a pound, the value of the ox will be £. 24. 7 *s.* 6 *d.*—Or a sheep whose weight is laid at 25 pounds a quarter, that is 5 Score, at 7 *d.* a pound, is worth £. 2. 18 *s.* 4 *d.*

Should occasion be had to get at the value of a sheep or a lamb by the pound, of a less weight than the first number in the Table, 1 Score or 20 *lb.* it may be done by taking the *half* of any of the weights specified; or to get at the weight of an ox heavier than the highest number, which can very rarely happen, it may be done by taking the *double*.

In calculations of this sort some inaccuracies may possibly occur, but as these Tables were drawn up by a very good accomptant, and have since been carefully corrected, the Publisher flatters himself none will be found.
